ABSTRACT

Commodity derivative market in India is growing at a faster pace. Farmers in India feel that this market will have adverse impact over them. According to them, the farmers regular market will be dominated by the players of the commodity derivate market players and these players will further strengthen the volatile situation in the market, that paves the way for the researcher a stepping stone to venture in to the research work to find out whether the commodity derivate market of agricultural commodities will have any impact over the regular farmers market in terms of its price and market conditions. This paper is an attempt to discover the impact of commodity derivate market of agriculture produces over the regular farmer market, and bring out the real situations to the outside world with the view to make the investors to understand the prevailing situation in the commodity derivative market as well as regular farmer market conditions, the researcher has taken in to consideration of two produces which are existing in the both the markets and analyzed the real situation and bring new insight in to the way these markets are being looked into.

KEYWORDS: Derivative market, regular farmer market, Volatile situation, market conditions
