ABSTRACT

The current paper looks for the possibility of the implication of the web 2.0 tools in current library system. The paper describes the theory and practices of the web 2.0 in library system. The introduction of the web 2.0 tools in the library might make changes in libraries and its services. The paper contains the substantial implications of the concept of “web 2.0” for libraries. It describes web 2.0 tools and the possible services provided by these software and services. Such web tools in traditional environment of library results to the more user friendly and led to the concept of library 2.0. Library 2.0 would revolutionize the information profession. The library 2.0 rather than creating services for patrons, librarians will enable users to create them for themselves. It is a major paradigmatic shift for librarianship to open not just access to their catalogues and collections, but access to their control.

KEYWORDS: Web 2.0 tools, Library system, implications.
