ABSTRACT
Investing in stock markets is a major challenge for all investing community. It carries the risk of heavy loss if the choice of securities is wrong or if they are not bought or sold at the right time. The financial position of BSE and NSE from 2000 onwards is quite satisfactory. The yearly trends in the benchmark indices over the period under review showed uniformity. While the returns were most negative, volatility was the highest in 2008 for both Sensex and Nifty.

KEY WORDS: Sensex, Nifty, Volatility, indices, recession, FIIs
