ABSTRACT

Capital markets are financial markets for the buying and selling of long-term debt- or equity-backed securities. Capital markets are defined as markets in which money is provided for periods longer than a year. These markets channel the wealth of savers to those who can put it to long-term productive use, such as companies or governments making long-term investments. Capital Market is one of the significant aspects of every financial market. The article will take into account the Impact of Market efficiency on Capital Market Trends. A financial market is a market in which people and entities can trade financial securities, commodities, and other fungible items of value at low transaction costs and at prices that reflect supply and demand. In economics, typically, the term market means the aggregate of possible buyers and sellers of a certain good or service and the transactions between them.

KEYWORDS: Capital markets, transaction.
