ABSTRACT

Bar-coding in library applications can be a process of generating machine readable specific code which is used for library transaction activities. The barcode technology system can also be used for faster and efficient library transactions especially the circulation. Barcode is an identification tool that provides an accurate and timely support of the data requirement for management system. This paper highlights the applications of bar code technology in university libraries of Tamilnadu and the satisfaction level of the staff. This study discusses the benefits of barcode technology and highlights the features of bar code scanners and printers.

KEYWORDS: Bar-Code Technology, Label, Printer, Scanner.
